

CELUS eats SUSHI for breakfast... ...and delivers insights by dinner lunch

CELUS is a powerful, yet simple and affordable online software for automated harvesting and analysis of COUNTER and non-COUNTER usage statistics, suitable for single libraries, library consortia, and publishers.

Focus on what your statistics mean, not how to piece them together.

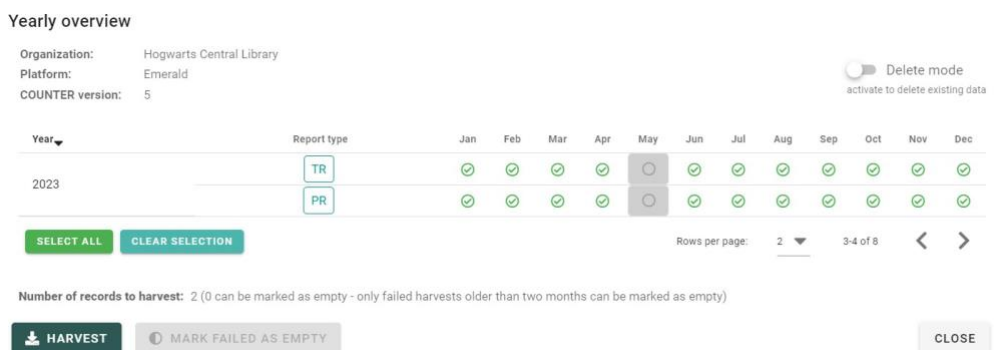

How does CELUS help librarians?

All usage statistics in one place

Effortless SUSHI Management - easy setup, automated upkeep

CELUS automatically harvests **COUNTER usage reports** via SUSHI. With bulk credential upload and expert support, CELUS quickly resolves common issues and securely stores your SUSHI credentials. Once set up, CELUS seamlessly harvests your monthly usage data, allowing you to identify and fill any gaps.

Crafted by librarians,
for librarians

The CELUS project started in 2018 as an **open-source project for CzechELib, the Czech national consortium of academic libraries** by a privately held company Big Dig Data. The acronym "CELUS" stands for "CzechELib Usage Statistics." Big Dig Data, as the name suggests, develops custom solutions for big data processing.

Processing custom non-COUNTER reports

CELUS can process over 100 usage reports from **non-COUNTER-compliant sources**, with new ones added regularly based on user requests. No matter how obscure your data, CELUS handles it, making analysis, comparison, and reporting easy.

Manual uploads of historical usage data

Have historical data no longer accessible via SUSHI? With CELUS, you can **manually upload** and securely store any COUNTER reports, ensuring they're available for viewing and analysis anytime, with no expiration. **All your usage statistics, old or new, are safely stored in CELUS forever.**

Fast and powerful data analytics

Comprehensive reporting module

Our reporting module lets you easily create customized reports and export them, complete with charts, in MS Excel for further analysis and sharing.

ACRL IPEDS and ARL reporting in one click

How much time did you spend analyzing e-resource usage stats for your last IPEDS or ARL reports? CELUS can do it with one click. Plus, you can export results to an Excel file with computation formulas, making further analysis and reporting even easier.

Cost-per-use analysis

CELUS offers cost-per-use analysis, allowing you to understand the true value of your resources by comparing usage data against costs and making informed decisions on resource allocation.

Tagging Platforms and Titles

CELUS lets you enhance your analysis by adding custom tags to platforms and individual titles, offering multiple perspectives on your resources. It also automatically identifies open-access content, simplifying e-book usage analysis and collection performance evaluation.

Identification of overlapping subscriptions

CELUS identifies overlapping subscriptions across vendors and platforms. It highlights redundancies, helping you streamline acquisitions and maximize your budget efficiency.

Year-to-year usage comparison

Tracking trends over time is essential for informed decision-making. CELUS offers year-to-year usage comparisons, helping you monitor changes, measure the impact of new resources, and adjust subscriptions based on user behavior, ensuring your investments meet user needs.

24/7 Customer Support

Although we're a small team, we're committed to responding to your questions within 24 hours. Explore our **extensive knowledge base, tutorial videos, and a community forum** where users share their insights. We're also eager to implement **new features based on your needs**, ensuring CELUS evolves with you.

No setup, no installation

CELUS is a **web-based application**, so there's no need to install bulky software. Simply open your browser, log in from any device, anywhere, and experience its lightning-fast performance.

Integrations

COUNTER Metrics

As the team behind CELUS, we're not just users—we're builders. We developed the interactive **Registry of COUNTER-compliant platforms** and are currently working on the new **COUNTER validation tool for publishers**. Our active role in COUNTER's Technical Advisory Group keeps CELUS fully compatible with the latest standards, ensuring seamless integration with the Registry, automatic SUSHI URL population, and comprehensive report support.

ConsortiaManager

ConsortiaManager is a globally used e-resources management (ERM) workflow tool for **managing subscriptions, contracts, invoicing, and price negotiations**, and now—thanks to integration with CELUS—combining prices with usage data to **clearly see if your investments in e-resources** are translating into use by your community.

Why choose Celus?

Designed and built together with the community. A COUNTER and non-COUNTER usage statistics reporting tool you really want to work with. Finally. Focus on what your statistics mean, not on how to piece them together.
